

Religious and Cultural barriers

- Stigma and discrimination is still popular among Muslim
- Churches actually do not consider HIV/AIDS one of their problems rather than moral issue.
- How to get monks involved in HIV/AIDS prevention and control when monks are not encouraged to talk about sex and sexuality?
- In transmission from mother to child, children get more attention and care than mothers (India).
- Gender issues need to include transgendered people besides men and women. There are not many researches on impacts of HIV/AIDS on transgendered people.
